

Sliding Man Door

American Mine Door® offers a sliding man door for personnel access through locks as well as any areas where an access way is required. Sliding man doors can be installed into areas with pressure differentials up to 15 inches. These doors can easily be open and closed even under these extreme pressure differentials.

Operational and design features and specifications:

- The sliding man door typically used in areas where space is an issue.
- 1 ½" x 3/16" Sq. tubing frame with evenly spaced supports over the area of the door.
- 10 ga. HRS skins
- A dual roller trolley design ensures smooth door operation.
- Can be open from either side.
- Easy to install, door hangs from trolley system and is captured at the bottom via a steel frame roller guide.
- Doors can be built to any required size
- Steel wall stop is located to avoid over travel.
- Ordered left hand or right hand at time of ordering
- Powder coated per customer requirements.
