

## Opposing Wing Pedestrian Doors

Operates under the same principles as our traditional mine doors. These doors remain easy to open, due to our "balanced" opposing wing door design.

### Operational and design features and specifications:

- A door closer is used to keep the door in the closed position
- Can be supplied in either 90° or 63° orientation to the ribs.
- A connecting rod is used to connect the two door wings at the top of the door.
- Standard size: At 63°, Free and Clear 36" W x 84" H, at 90°, 42" W x 84" H"
- AMD will engineer and design any size pedestrian door to fit your needs
- Three "barn style" hinges used on each door wing
- Plexiglas windows installed on both door wings
- Rubber bratticing is used around perimeter of the door as a seal. Brattice is adjustable on the top and bottom of both wings.
- Doors are painted safety yellow with 2-part epoxy paint.

Call AMD for any opposing wing pedestrian door needs!
